Matthew Sturgis, Chairman Gray Town Council Henry Pennell Municipal Complex 24 Main Street Gray, Maine 04039

Monument Square Master Plan Study Update to the Town Council

Dear Counselor Sturgis:

On behalf of the Liberty Family Foundation and in partnership with the Town of Gray, we are pleased to have the opportunity to present an update to the Monument Square Master Plan Study at the August 20th meeting.

The purpose of this presentation will be to provide the Council with the current site program, potential project estimated costs and budget, the proposed phasing and solicit any feedback on the master plan from the Council. I have provided herein a summary of the key provisions of the study as well as an overview of the background for the Council's review.

1. Background:

The Liberty Family Foundation (LFF) together with the Town of Gray initiated a Letter of Agreement (LOA) for the implementation of a Master Development Plan for the Monument Square Block with the goal of revitalizing the block in Gray Village which at its core includes the former Town Hall, Post Office and Stimson Hall properties. The Town had for the previous year and a half been engaged in a public participation process to solicit ideas for re-development of the Monument Square Block properties. The initiative for re-development recognized that a successful development plan required the cooperation and involvement of a number of adjacent property owners - the "Stakeholders". The LOA was signed on or about May, 2012 by the property owners as Stakeholders, the Town and including the MSAD-15 School District.

A mission statement for the group process was proposed and agreed upon at the first stakeholder meeting as follows:

Mission Statement:

To advance the economic and cultural vitality of Gray Village through the study of a master planned development of the former Town of Gray properties (Town Hall/Post Office/Stimson Hall) and adjoining public and private stakeholder properties "The Monument Square Block".

The LFF has retained a design team of professionals to initiate and assist in the master planning process. The process of meeting with stakeholders both in group meetings and individually, performing due diligence and developing master plan concepts was initiated and a series of stakeholder meetings commenced in October, 2012. At this time additional key property owners located adjacent to or near the study area were invited who were not within the initial stakeholder LOA group. The master plan has been refined and supporting engineering analysis performed since then to get to the current "Option D" Master Plan, (Figures 1 and 2). (Figure 2 is an aerial overlay of the Master Plan to help "register" where the various improvements will be a compared with existing site features.) This plan incorporates the consensus of the stakeholder group goals yet requires some minor refinement to gain 100% consensus of a few of the stakeholders.

The final draft master plan and proposed accompanying zoning are anticipated to be ready for review by the Council, Planning Board and the public for final adoption this fall.

2. Funding of the Master Plan Process:

The Liberty Family Foundation has generously underwritten all of the planning and engineering costs for the Monument Square Master Plan project. The design team has worked closely with Town staff in a collaborative approach. The energy and assistance of staff has been an invaluable asset to the design team.

3. Master Plan Development Program Summary:

The Master Plan Option D/D1 is the current plan concept being considered. The plan incorporates the following development program, more specifically defined in terms of building square foot and parking potential on Figure 3 - Development Program Summary. Refer also to Figure 4 for Parking and Wastewater Generator Tables based on the proposed development program.

(Item Letters below correspond to Figure 3 and Master Plan Figure 1.)

Douglas Field - Little League Field - Re-orientation and construction of a new high-caliber Little League (12 and under) field including fencing, screening, bleachers, dugouts, possible night lighting system, irrigation, two level press-box and concession building, restrooms (connected to common septic system), landscaping, and shifting of the existing player-pitch field which is impacted by the proposed field shift. The new field is located to the north east of the current Douglas Field. The field complex becomes both a visual connection and an activity center for the village area.

The field location would require acquisition of an approximately 0.30 acre parcel from the adjacent lot (Map 35 Parcel 402-57 – Vachon/Beck) located on Main Street. Discussions with the owners of that lot have been favorable but reserved due to concerns over the current noise and use of Douglas Field. The LFF is willing to purchase the land and provide for significant screening, netting to mitigate errant foul balls or plantings. However the owners have just recently become more reluctant to offer the land for ball field use which would require shifting the entire ball field towards the parking and orienting center field towards Russell School if their property cannot be used. The design team will continue to work with the owners to try to find a

workable compromise. This shift would certainly compromise the quality of the overall plan and make the ballpark and parking "tight".

- A. **SAD 15** Improved and separated bus access, increased parking, providing a safer pedestrian linkage from Shaker Road to Russell School, maintaining grass play and recreation areas, over the proposed ball fields, opportunity for future new Central Office to replace the dated structure currently in use, allowance for shifting a new Douglas Field partially onto SAD-15 property and allowance for moving the player-pitch field.
- B. **10 Shaker Road (Marion Property)** Potential for addition to existing commercial/residential apartment building increase shown of 1,625 s.f. of building area. Expansion would provide for shared parking within new central parking area, new access from project access drive to parking at rear, and easement over that lot. Increased septic capacity to be provided with common subsurface wastewater disposal system (septic system) located under parking and in common grass areas.
- C. Town Property Potential for 12,000 s.f. (two story) mixed use, professional office, retail or other use building. All parking to be in the rear in main parking lot. Pedestrian sidewalk linkages and green space provisions to enhance Shaker Road streetscape. Connect to common septic system.
- D. **Stimson Hall** Create a green space connection to the Monument and gateway into the central core of the project site. Opportunity for re-development of Stimson as cultural, community enrichment or performing arts facility or similar use. Remove access drive from Shaker Road and use shared central parking lot in rear. Maintain a combined fire access/sidewalk along southerly end of lot.
- E. **Plaza** provides for desired second floor additional 6 apartments and commercial office space. Currently any site expansion is limited by parking. Use of shared parking in rear provides for expansion potential. The site has a current septic system sized to support the expansion.

Note: Initial discussions with the owners of the Plaza were favorable towards creating a new shared access with the Manchester Realty property to the east, closing off several of the curb cuts, redesigning the parking layout and circulation and providing for streetscape landscaping within the MDOT Route 100 (Main Street) right of way. It is critical to the owners that no parking be lost in the front parking lot and due to past experience and mis-use parking spaces by patrons of other businesses, they simply cannot consider revised parking and a shared access corridor (to the ballfield and parking lot) without risk of losing those spaces to patrons of other businesses again. The design team has presented several parking and access options and will work on a new concept to attempt to meet the owner's goals.

However, the current position is that they will not provide a new 24-foot shared two-way access as originally planned to access the rear ballfield and parking facility from Main Street but will continue to allow use informally with a reluctance also to change the current parking layout. The design team is working to find a compromise position on this important access issue. The formal access to the ballfield facility and central parking lot will continue to be from Shaker Road

- F. Manchester Agency Commercial Building(s): Notwithstanding the new position on item E above, this property is shown with a proposed second floor commercial office addition to the rear office building adding 1,250 s.f. If an agreement with the Plaza cannot be reached the 24 foot shared access drive and increased parking opportunity from a more efficient use of that lot parking, the Manchester Agency lot will have to revert to existing conditions and driveway with separating fence to the Plaza. Shared parking in the central parking lot could be used to increase parking capacity however.
- G. Advance Realty II Parcel Potential for senior housing, congregate care facility or any other commercial or residential medium density use. The scenario presented is considered a "maximum build-out" concept at 60 congregate living units (3-story building) on roughly onehalf the lot or 4+/- acres. It is likely that a lesser intensity use would be more in keeping with the site. Allowances for parking meeting typical standards, stormwater and septic have been provided for.
- H. Advance Realty II Parcel Potential for second half of the site to be occupied by a 16,000 s.f. single level medical office building or similar use. Parking, septic and stormwater facilities have been provided for.
- I/J. Beck/Vachon and Dow Parcels, Main Street Plan and zoning will allow for increased density of use on these lots with any parking needs being met on the lots due to the distance to the central parking facility. Opportunities for septic expansion, if required, and if not available on the lots could be connected through a force main to the common septic system.

Other Program Amenities:

- Interconnected pedestrian and bicycle path linkages.
- Common clustered septic system with appropriate use and maintenance easements.
- Improved streetscapes on Main Street and Shaker Road
- The opportunity to link to the Hancock Block and the rest of the central village with parking and improved pedestrian access

4. Phasing:

Figure 5 – Phasing Plan provides a suggested construction implementation plan for the development. The initial phase (Phase 1A) would remove the former Town Hall and Post Office, loam and seed that area as a temporary pocket park space and construct the new main access into the proposed parking area –creating a usable access and more importantly visual interest and curb appeal for prospective developers interested in the Town lot development. It would be appropriate to place a temporary or permanent sign in this phase as well.

The ball park would commence as Phase 1B in the first season (2014) and we have suggested phasing the parking lot as a gravel lot with drainage installed initially and in the second year (Phase 2) completing paving, walks, curbing, lighting, etc. or as development of the Town lot occurs.

Subsequent Phase 3 and 4 as shown on Figure 5 would follow.

Phasing and installation of the common septic system is an item which needs further discussion as a portion of the system would be located under proposed parking warranting installation up-front increasing capital costs with monies returned as users connect through a user-agreement.

5. Cost Projections:

Figure 6 – Opinions of Probable Cost provides preliminary cost projections for each phase of the project. The opinions of cost should be used for preliminary budgeting as no formal surveys or engineering have been performed. Contingencies and engineering & permitting allowances have been added to reflect the preliminary nature of the base information used. It should be understood that these costs do not include individual lot surveys or legal costs to assign easements, etc. Additional phases labeled as "Stakeholder Properties – Future Development" on the Phasing Plan are not included in the opinions of cost. The summary of cost projections are:

	Total:	\$1,250,059
Phase 4:	Stimson Hall Site Improvements	\$ 65,415
Phase 3:	Rear Plaza Parking & Streetscape Improvements	\$ 75,275
Phase 2:	Parking Lot Paving, curbs, walks, lighting	\$185,441
Phase 1B:	Ballpark, Septic and Gravel Lot/Drainage	\$847,605
Phase 1A:	New Access and Building Removals	\$ 76,323

6. Project Financing Options:

The Liberty Family Foundation has pledged up to \$1,000,000 for the project including soft and hard costs. Rick Liberty will address the Council in further detail on funding and at the August 20th meeting.

It would be expected that additional cost sharing to meet the anticipated project budget might come from the following sources:

- A. Development of Town Parcel Developer reimbursement to Town or LFF for pro-rata number of parking spaces developed in advance of that lot development. Create performance standards requiring streetscape improvements for Shaker Road or Main Street Lots by developers.
- B. Reimbursement through user fees to any excess septic system capacity installed in the early phases for eventual future build-out.
- C. Town Construct Phase 1A access and lot removals on Town Lot.
- D. Town Consider a TIF for the project development area.
- E. Town Research Rural Water Association, EPA or other grant opportunities for community wastewater system.
- F. Town Application for CDBG funding for Main Street, Shaker Road Access or other eligible improvements
- G. Town Developer impact fees.

H. Town – Provide labor/equipment in-kind for portions of the construction and/or support for legal counsel fees for final Master Plan review, easement documents, etc.

We look to the Council for guidance on alternative financing options.

7. Zoning Standards:

Proposed zoning standards are currently in development and will include reduced setbacks, increased development densities, variable mixed uses permitted, design standards and allowance for shared parking where capacity can be demonstrated. The project area is currently in the Village Center and Village Center Proper Districts.

8. Easements and Legal:

The design team has prepared a draft easement plan which provides for cross easements for parking, access, utilities, wastewater disposal and pedestrian access which we will present at the August 20th meeting to gain a general understanding of the legal mechanisms which will have to be incorporated into the final Master Plan Letter of Agreement with all of the Stakeholders.

We trust that this submission provides a thorough update on the project. We look forward to discussing the project in further detail with a focus on cost and funding options at the meeting of August 20th.
